

Design | Turn-key

Our staff is dedicated to creating solutions that can be built using current industry equipment. Our designs are results oriented. "The best design doesn't always sell the best." We follow our retail roadmap process for every project, allowing us the efficiencies, phase by phase, from initial design parameters through production and fulfillment of product.

Metal & Wood

Diversipak works with wire, sheet goods, wood and laminate products. Through design, we create the best solutions using the most effective materials. Our wood shop has full production abilities and mold making experience. With CNC laser cutting and welding capabilities we can provide a wide range of solutions for every project.

Corrugate, Plastic & Multi-Discipline

Diversipak began in the corrugate display business. Teamed with our sheet suppliers- we offer laminating, die cutting and assembly of packaging and display products. We incorporate plastic - molded and fabricated into many overall designs. Diversipak creates many of its own custom extrusions - molded hooks and merchandise holders from design to production. We offer multi-discipline solutions that get results!
